

Google Sheets Practice Questions – Mall Customers Dataset

1. Find the average age of all customers.
2. Count how many Male and Female customers are in the sheet using a formula.
3. Find the name (CustomerID) of the customer who has the highest Spending Score.
4. Count how many customers have an Annual Income above 50 (k\$).
5. Use the AVERAGEIF formula to find the average Spending Score for Males and for Females.
6. Find how many customers are below 30 years old and have a Spending Score above 60.
7. Sort the data by Spending_Score (highest to lowest) and list the top 5 CustomerIDs.
8. Create a new column called Income Category: 'Low' if Income < 40, 'Medium' if Income between 40 and 70, 'High' if Income > 70.
9. Create a new column Spending Category as: 'Saver' if Spending_Score < 50, 'Shopper' if Spending_Score ≥ 50.
10. Create a pivot table showing Average Spending Score grouped by Income Category and Gender.
